

## *It's now possible to include everyone.*

For the first time, whether planning a service to meet an immediate need or thinking ahead, funeral plans can involve every friend and family member, regardless of where they live. World Wide Memorials powered by Event By Wire and endorsed by the California Funeral Directors Association, provides an easy-to-use webcasting system that enables Funeral Homes to discreetly broadcast "live" video and sound of the memorial service via the Internet directly into the homes of those loved ones who cannot physically attend the memorial. And, if "virtual" guests aren't available at the exact time of the event, they can access the ceremony for up to 90 days.

## *It's so easy to use.*

World Wide Memorials can be set-up in virtually any location with a wired or WiFi broadband connection in just about five minutes. Family and friends are invited by email and simply click on the link and through a high speed connection to their PC, and view the service using Windows Media Player, available on nearly 95% of the world's PC's. The system comes packaged in a carrying case making it completely portable, allowing religious, memorial, interment services all to be broadcast.

## *It's a new way to Differentiate yourself.*

World Wide Memorials opens up an entirely new avenue for growth while bringing an important service to families. Simply by purchasing the World Wide Memorials system and subscribing to the service for a low monthly fee, Funeral Homes can leverage the newest technology to connect loved ones while simultaneously adding a new income opportunity to their business and differentiating themselves from the competition.
